

KOOSHA PARIDEHPOUR

Santa Monica, CA | kooshapari@kooshapari.com | [LinkedIn](#) | [GitHub](#)

SOFTWARE ENGINEER | REAL-TIME SYSTEMS | SIMULATION | AUTONOMY | INFRASTRUCTURE

EDUCATION

Arizona State University | Tempe, AZ

M.S. Computer Science | GPA: 4.0/4.0

May 2026

B.S. Computer Science | Barrett Honors College | TGPA: 3.65/4.0 | 3x Dean's List

Dec 2025

ENGINEERING EXPERIENCE

Stealth Startup - AI Requirements | **Lead Software Engineer / TPM** | Tempe, AZ

May 2025 - Jan 2026

- Led engineering execution across five teams building an AI-driven requirements and traceability platform; defined architecture, interfaces, development standards, and cross-team delivery workflows.
- Built an MCP service, CI/CD and QA infrastructure, and Discord/Coda/GitHub/Jira integrations that automated task flow and knowledge sharing.
- Designed versioning and traceability workflows informed by SysML; translated sponsor needs into testable platform features while coordinating IP, legal, and stakeholder constraints.

CVS Health | **Development Engineer, AI Innovation (DDAT / InnoTech)** | Scottsdale, AZ

May 2025 - Aug 2025

- Won the company-wide intern innovation challenge with a patient ePA automation proposal and delivered the prototype ahead of schedule; selected for an organizational pilot.
- Mapped a manual process into an agentic workflow with explicit human validation, operational guardrails, data requirements, and rollout criteria.
- Presented architecture, operational risks, and expected ROI to executive leaders across Digital, Data, Analytics & Technology and Innovation teams.

Mouser Technologies | **Software Engineer** | Santa Ana, CA

Dec 2023 - Aug 2024

- Built a responsive dealership website and vehicle-listing inventory interface, translating product requirements into production web workflows.

Stealth Startup - Offline-First ERP | **Lead Software Engineer** | Ithaca, NY

Oct 2023 - Jan 2024

- Led development of an offline-first React Native ERP/accounting application and coordinated product delivery across the development team.

SELECTED PROJECTS

Civis | Rust, hecs ECS, WebSockets, JSON-RPC, Bevy

- Developed a deterministic fixed-step simulation engine with replay and BLAKE3 hash-chain validation; exposed state and commands over WebSocket JSON-RPC and compact binary frames.
- Implemented and maintained 28+ Tokio server integration tests covering health, RPC, spawning, role gates, and replay import/export.

Project Spyn | MATLAB, LEGO EV3, PID control

- Programmed gyro-based PID turning and lane centering, ultrasonic obstacle avoidance, route scanning, color-zone behaviors, and manual-control handoff for an autonomous EV3 vehicle.

Substrate | Rust, Axum, Prometheus

- Built a resilient dispatch gateway with token-bucket rate limiting, full-jitter retries, circuit-breaker/fallback logic, hot-reloadable configuration, per-session budgets, and P50/P95/P99 telemetry.

Tracera | Rust, REST APIs, WebSockets, observability

- Architected a traceability and audit ledger for agent workflows with evidence, impact, coverage, governance, health/readiness, and GitHub/Jira ingestion surfaces.

ADDITIONAL LEADERSHIP

Phenotype | **Product Manager** | Santa Monica, CA

Oct 2020 - Present

- Owned product, operations, supply chain, e-commerce, and 10+ international vendors for joint ventures; generated more than \$400K in revenue in 30 days and reduced manufacturing costs by over 25%.

TECHNICAL SKILLS

Languages: Rust, Go, Python, C/C++, Java, TypeScript/JavaScript, SQL, MATLAB

Systems / Infrastructure: Linux, AWS, Docker, Kubernetes, GitHub Actions, CI/CD, REST, WebSockets, OpenTelemetry, Prometheus

Frameworks / Data: Axum, Gin/Fiber, React, Svelte, PostgreSQL, Redis
