Software Engineering

Software engineering, technical prototyping and systems design experience spanning AI-assisted workflows, traffic simulation and product delivery.

Experience

CVS Health - Development Engineer, AI Innovation (DDAT)

Scottsdale, AZ | Internship | May-August 2025

- Delivered an AI workflow-transpilation project that converted a manual process into an agent workflow; completed the planned ten-week scope by week three, and the system was subsequently piloted.
- Won an innovation challenge with a separate electronic prior authorization proposal.

Atoms.Tech - Technical Program Manager

Tempe, AZ | Capstone engagement | May 2025-January 2026

- Coordinated work across three teams (approximately 15 contributors) developing an AI-assisted requirements and systems-traceability platform amid changing sponsor priorities.
- Took on product and technical coordination, prototyping and engineering guidance as responsibilities expanded beyond initial engineering work.
- Built Discord-based bug and feature intake and deployment controls to simplify sponsor communication and manual deployment steps.

Akoma - Lead Software Engineer

Remote / Ithaca, NY | Contract-style engagement | October 2023-January 2024

- Contributed to internal delivery of an offline-first React Native ERP/accounting application.
- Took on product management, prototyping and engineering guidance alongside software engineering responsibilities.

Phenotype - Hardware Product Programs

Independent projects | Variable, leisure-time commitment

- Led product and operational work across hardware development, manufacturing and international distribution.
- GMK Arch generated approximately \$432K revenue across 4,900 line items; WITF generated approximately \$40K across 150 line items.

Selected Project

NetWeave - Traffic Simulation

- Designed specifications, architecture and algorithms for a Go traffic simulator combining a directed road graph, per-road cellular automata and A* routing with WebSocket visualization.
- Directed heavily AI-assisted implementation; identified congestion-aware routing and dynamic rerouting as future extensions.

Education

Arizona State University - B.S. Computer Science, December 2025, Cum Laude

Technical Skills

Strongest languages: Go, TypeScript, Python, Java, C. Rust: reader-level familiarity and AI-assisted project exposure.
